Algorithms

OBJECTIVES

After reading this chapter, the reader should be able to:

- Understand the concept of an algorithm.
- Define and use the three constructs for developing algorithms: sequence, decision, and repetition.
- Understand and use three tools to represent algorithms: flowchart, pseudocode, and structure chart.
- Understand the concept of modularity and subalgorithms.
- List and comprehend common algorithms.

8.1

CONCEPT

Figure 8-1

Informal definition of an algorithm used in a computer

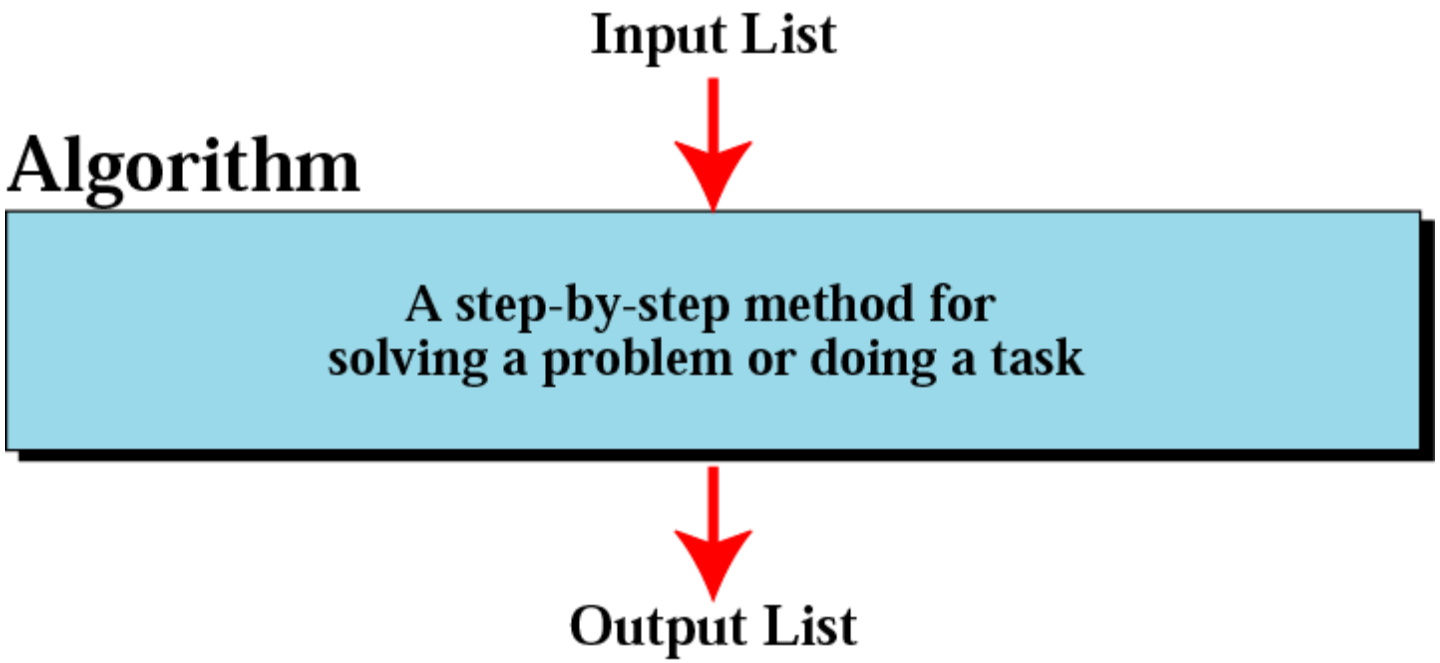

Figure 8-2

Finding the largest integer among five integers

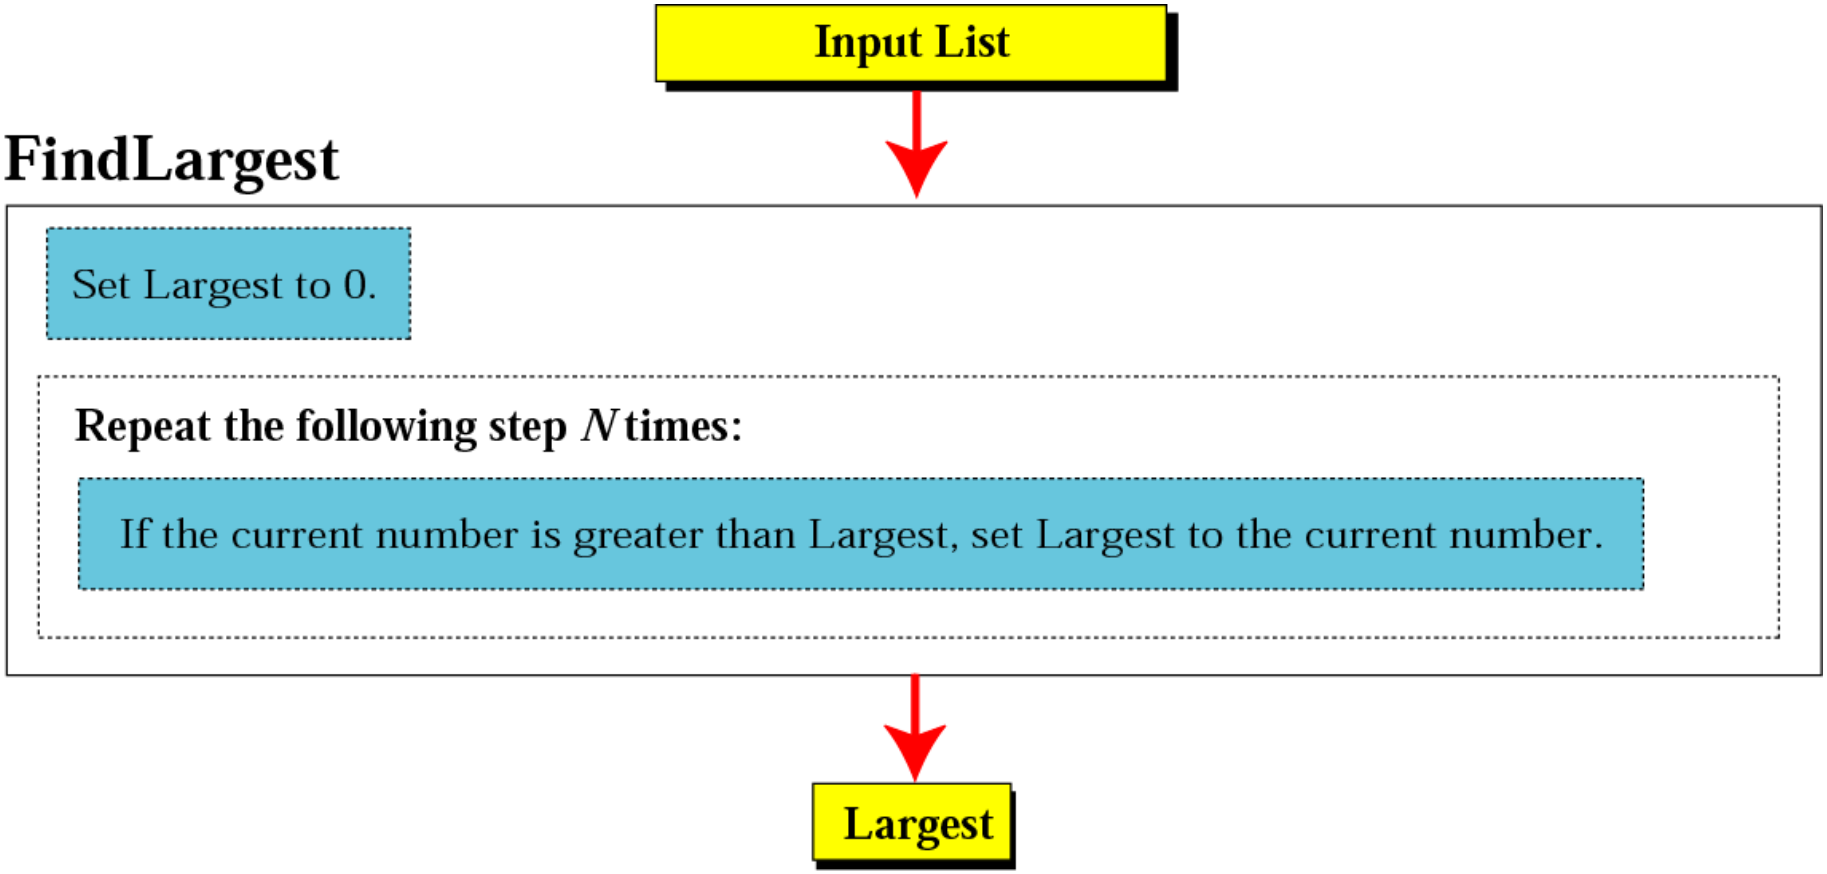
Generalization of FindLargest

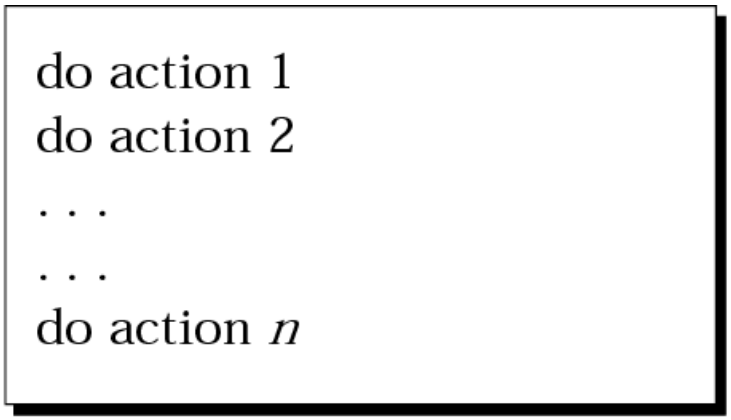


8.2

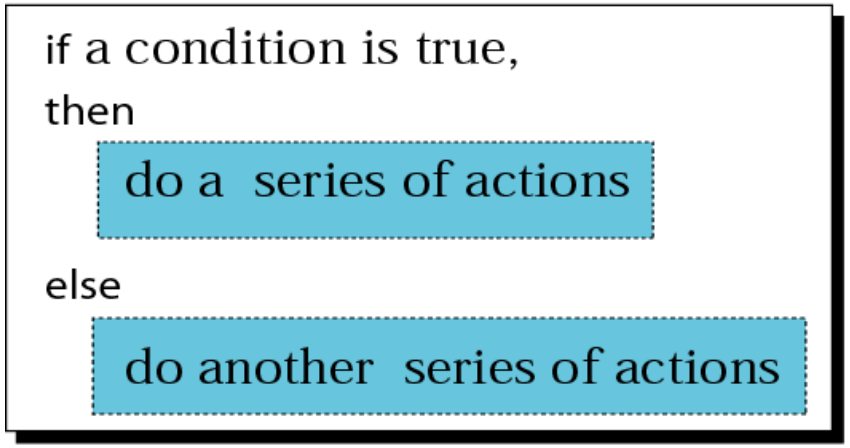
THREE CONSTRUCTS

Figure 8-6

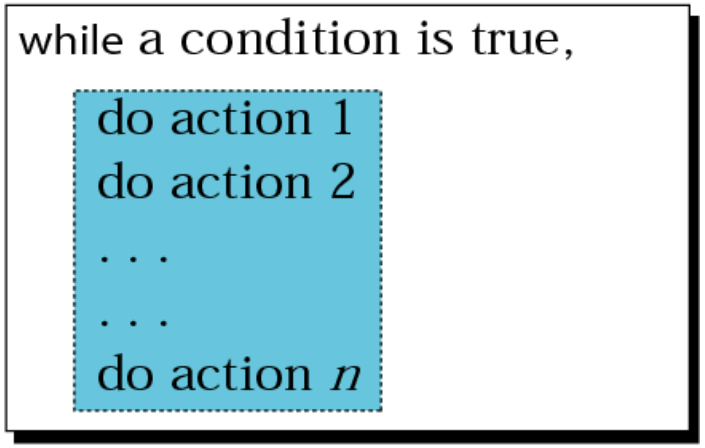
Three constructs



a. Sequence



b. Decision



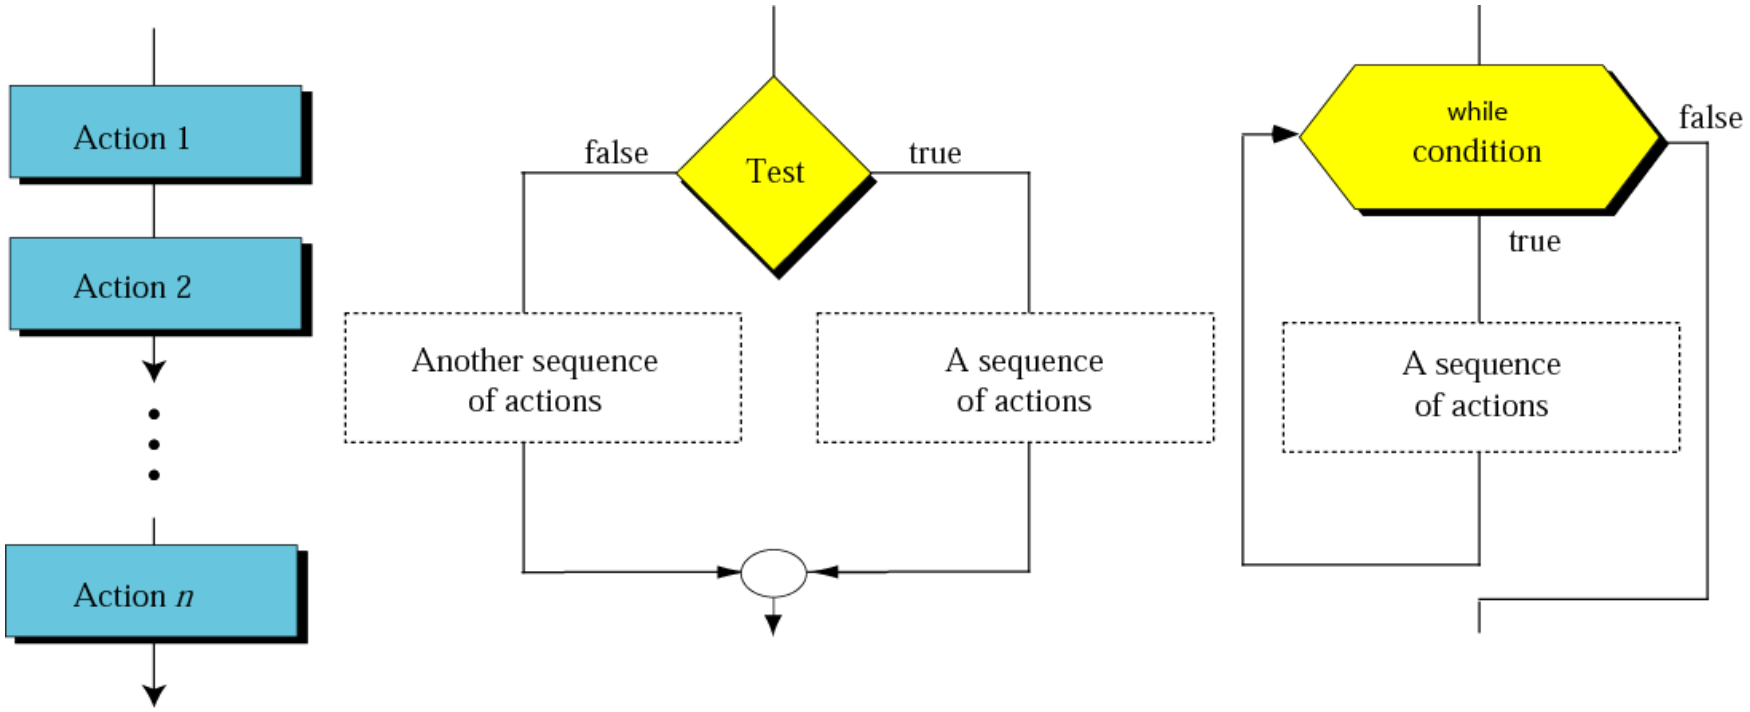
c. Repetition

8.3

ALGORITHM REPRESENTATION

Figure 8-7

Flowcharts for three constructs



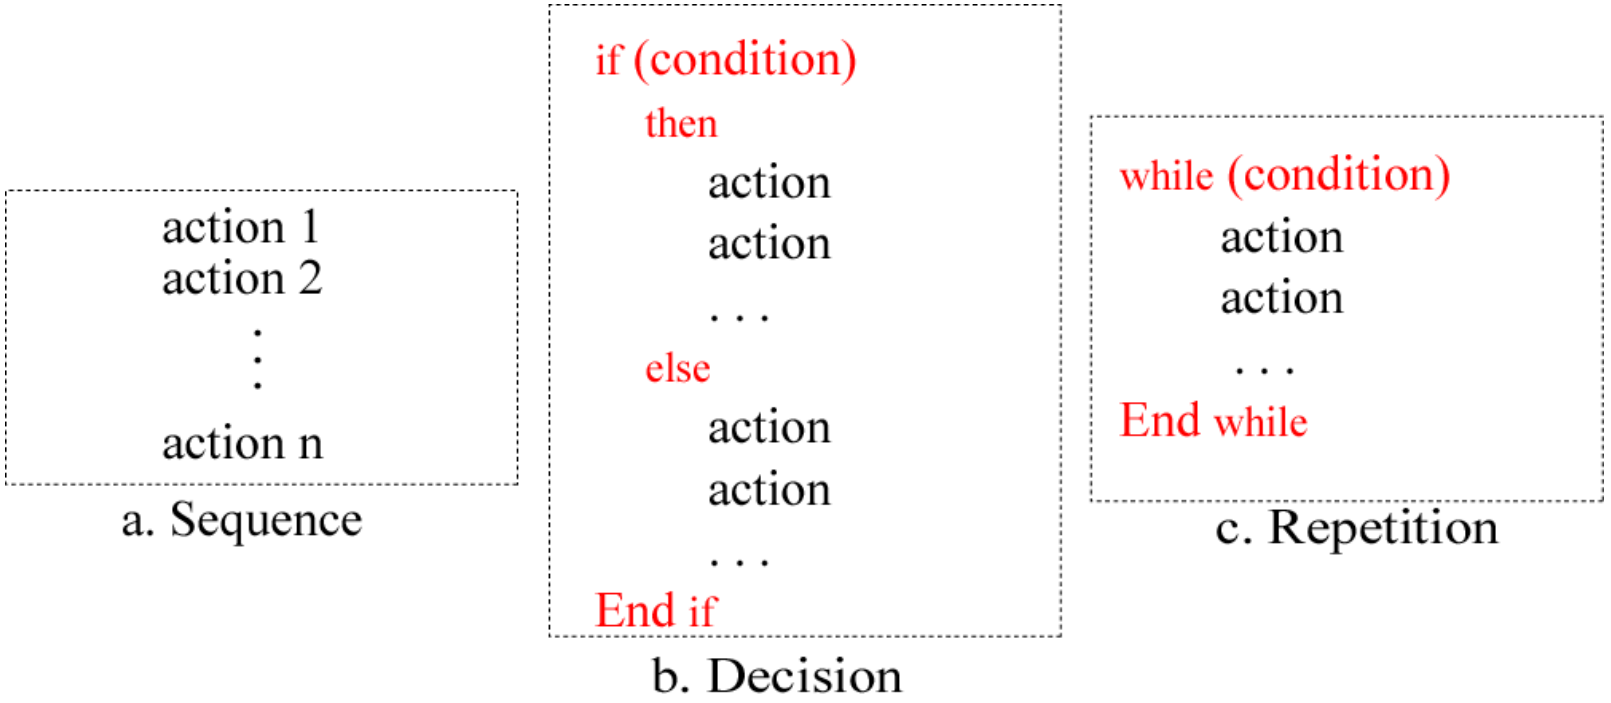
a. Sequence

b. Decision

c. Repetition

Figure 8-8

Pseudocode for three constructs



Example 1

Write an algorithm in pseudocode that finds the average of two numbers

Solution

See Algorithm 8.1 on the next slide.

Algorithm 8.1: Average of two

AverageOfTwo
Input: Two numbers
1. **Add the two numbers**
2. **Divide the result by 2**
3. **Return the result by step 2**

End

Example 2

Write an algorithm to change a numeric grade to a pass/no pass grade.

Solution

See Algorithm 8.2 on the next slide.

Algorithm 8.2: Pass/no pass Grade

Pass/NoPassGrade
Input: One number
1. **if (the number is greater than or equal to 70) then**
   1.1 Set the grade to “pass”
   else
   1.2 Set the grade to “nopass”
   End if
2. **Return the grade**
   End

Example 3

Write an algorithm to change a numeric grade to a letter grade.

Solution

See Algorithm 8.3 on the next slide.

Algorithm 8.3: Letter grade

LetterGrade
Input: One number

1. **if (the number is between 90 and 100, inclusive) then**
   - **1.1 Set the grade to "A"**

   End if
2. **if (the number is between 80 and 89, inclusive) then**
   - **2.1 Set the grade to "B"**

   End if

Continues on the next slide

Algorithm 8.3: Letter grade (continued)

3. if (the number is between 70 and 79, inclusive) then
    3.1 Set the grade to “C”
   End if
4. if (the number is between 60 and 69, inclusive) then
    4.1 Set the grade to “D”
   End if

Continues on the next slide

Algorithm 8.3: Letter grade (continued)

5. If (the number is less than 60)
   then
      5.1 Set the grade to “F”
   End if
6. Return the grade
   End

Example 4

Write an algorithm to find the largest of a set of numbers. You do not know the number of numbers.

Solution

See Algorithm 8.4 on the next slide.

Algorithm 8.4: Find largest

FindLargest
Input: A list of positive integers

1. **Set Largest to 0**
2. **while (more integers)**
   - **2.1 if (the integer is greater than Largest)**
     - **then**
       - **2.1.1 Set largest to the value of the integer**
     - **End if**
   - **End while**
3. **Return Largest**

End

Example 5

Write an algorithm to find the largest of 1000 numbers.

Solution

See Algorithm 8.5 on the next slide.

Algorithm 8.5: *Find largest of 1000 numbers*

FindLargest
Input: 1000 positive integers

1. **Set Largest to 0**
2. **Set Counter to 0**
3. **while (Counter less than 1000)**
   - **3.1 if (the integer is greater than Largest)**
     - **then**
       - **3.1.1 Set Largest to the value of the integer**
     - **End if**
   - **3.2 Increment Counter**
   - **End while**
4. **Return Largest**

End

8.4

MORE FORMA DEFINITION

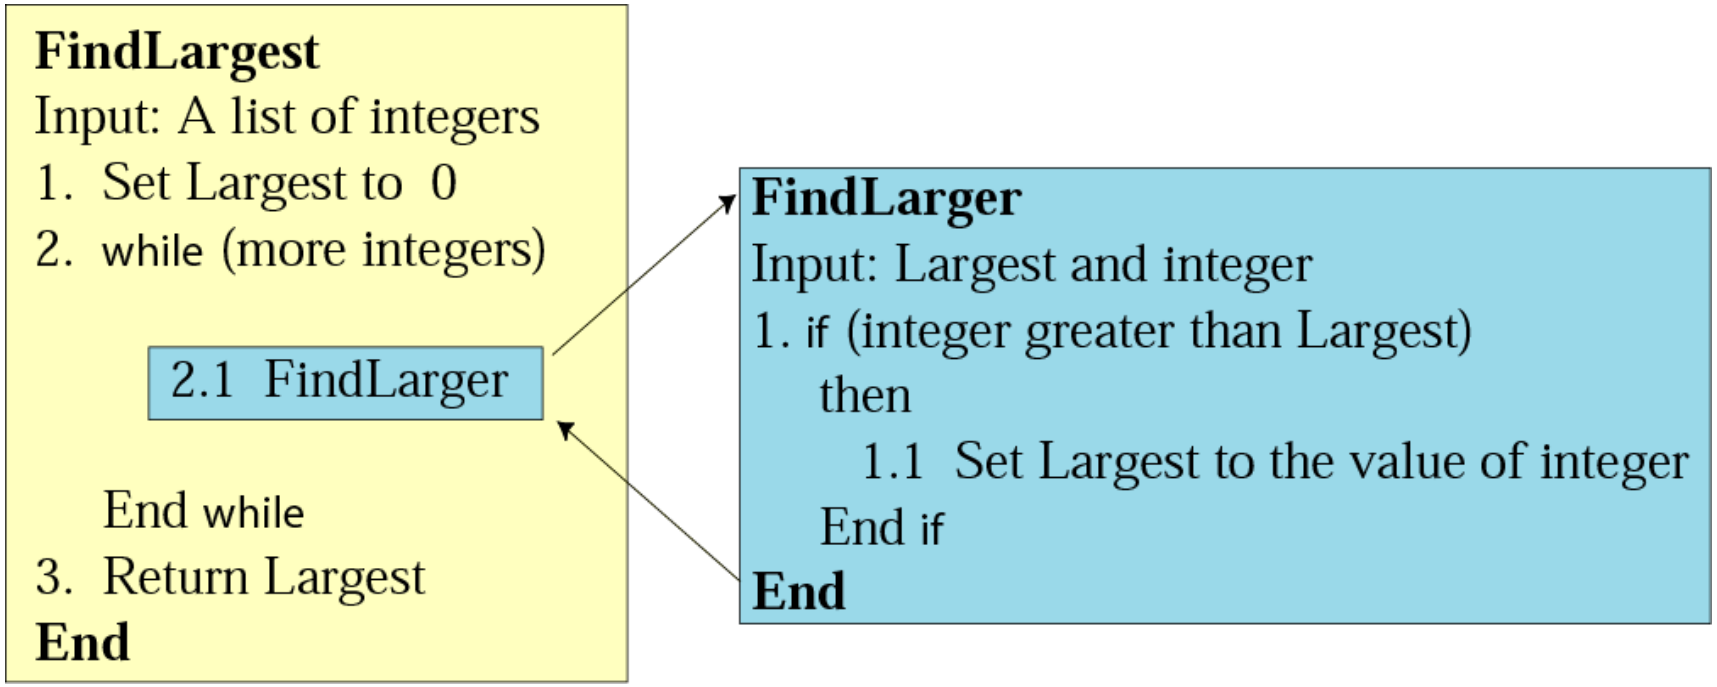
- *Ordered set*
- *Unambiguous steps*
- *Effectiveness*
- *Termination*

8.5

SUBALGORITHMS

Figure 8-9

Concept of a subalgorithm



Algorithm 8.6: Find largest

FindLargest
Input: A list of positive integers
1. **Set Largest to 0**
2. **while (more integers)**
   2.1 FindLarger
   End while
3. **Return Largest**

End

Subalgorithm: Find larger

FindLarger
Input: Largest and current integer
1. **if (the integer is greater than Largest)**
then
1.1 Set Largest to the value of the integer
End if
End

8.1

RECURSION

Figure 8-22

Iterative definition of factorial

$$\text{Factorial}\ (n) = \begin{cases} 1 & \text{if } n = 0 \\ n \times (n-1) \times (n-2) \times \ \ldots \ \times\ 3 \times 2 \times 1 & \text{if } n > 0 \end{cases}$$

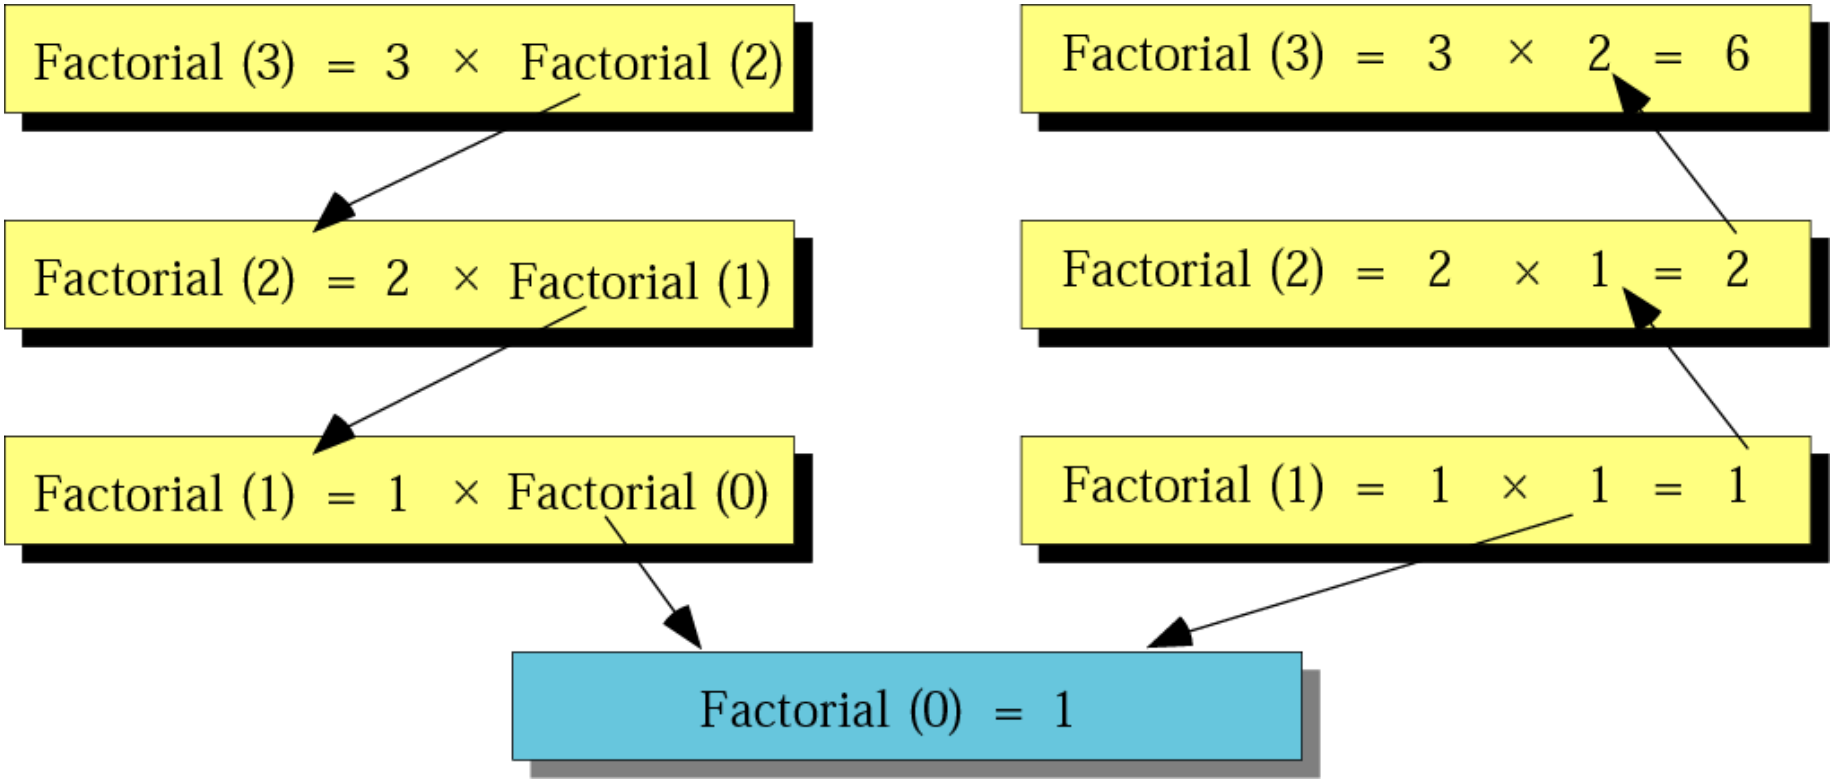
Figure 8-23

Recursive definition of factorial

$$\text{Factorial}\ (n) = \begin{cases} 1 & \text{if } n = 0 \\ n \times \text{Factorial}\ (n-1) & \text{if } n > 0 \end{cases}$$

Figure 8-24

Tracing recursive solution to factorial problem



Algorithm 8.7: *Iterative factorial*

Factorial
Input: A positive integer num

1. **Set FactN to 1**
2. **Set i to 1**
3. **while (i is less than or equal to num)**
   - **3.1 Set FactN to FactN x I**
   - **3.2 Increment i**

   End while
4. **Return FactN**

End

Algorithm 8.8: *Recursive factorial*

```
    Factorial
    Input: A positive integer num
1.  if (num is equal to 0)
    then
       1.1  return 1
    else
    1.2  return num x Factorial (num – 1)
    End if
    End
```
